Future of VET

The Future of vocational education and training (VET) project, covering the 27 EU Member States as well as Iceland, Norway and the UK, will contribute to a better overall understanding of the challenges and opportunities facing European VET in the coming years.

Building directly on the changing nature and role of VET in Europe project, the research will pay particular attention to the way the content and profile of vocational education and training is changing, responding to changing demands for skills and competences at work and in society at large.

The project will build on and integrate findings from other relevant Cedefop projects. The work is supported by a consortium of European research institutions and a network of national experts reporting on developments in the 30 countries covered by the project.

Thematic focus

- Changing content and profile of VET: epistemological challenges and opportunities
- Delivering IVET – Institutional diversification and/or expansion
- Facilitating vocational learning – The influence of assessments
- Delivering lifelong learning – The changing relationship between IVET and CVET
- Synthesis and trends
