Dr. Mette Creaser
Australian National Centre for Vocational Education Research (NCVER)

The Australian vocational education and training (VET) system: current reforms and the challenges these present for statistical collections

In 2012, Australia embarked on a program of vocational education and training (VET) reforms designed to develop a workforce skilled and able to adapt to rapid technological change in the workplace, and to maintain and improve our economic position in the face of increasing global competition.

In this presentation, I will provide an overview of the Australian VET system and the current program of reforms. I will then describe the range of data collected by the National Centre for Vocational Education Research (NCVER), how these have been expanded to contribute to the reforms, and the gaps and challenges that remain.

NCVER is Australia’s official statistical agency for VET statistics. Its mission is to inform and influence VET in Australia through credible, reliable and responsive research and statistical services.

Short bio

Dr. Mette Creaser is National Manager, Statistics and Analytics, for the Australian National Centre for Vocational Education Research (NCVER). NCVER collects, manages, analyses, evaluates and communicates research and statistics about vocational education and training (VET) nationally.

Mette is responsible for the national statistical program covering the collection and analysis of student activity, apprentices and trainees, student outcomes, and employer views of the VET system. She has recently taken over this role after seven years as Manager, National Surveys, where she was responsible for leading and managing a suite of national surveys.

Prior to NCVER Mette performed a variety of roles at the Australian Bureau of Statistics. Mette has a PhD from the University of Cambridge, United Kingdom.
